Backup for AWS

AWS adopts a Shared Responsibility Model in which they protect the data by providing the security of their cloud, while the customers are responsible for the security in the cloud. Even with a secure cloud, there are possibilities of data loss from human error or malware, etc. Vembu Backup for AWS is a simple, secure and cloud-native backup software for your AWS EC2 instances.

Customer Quotes

"The Vembu solution has increased Lentner Technology Integrator's bottom line for cloud backup services from $1 per GB up to $7 per GB. This has proved to be one of the most profitable services in our lineup offered to clients. In total, Vembu BDR has saved our clients an estimated half a million dollars in lost revenue from data loss last year."

Key Features

Backup from any AWS account: Backup AWS EC2 instances running in the same AWS Account as that of the BDR Backup Server or from any other account.

Agentless Cloud-Native Backup: Backup your EC2 instances without installing any agents as Vembu uses Amazon APIs to take the snapshots.

Automatic Backup Scheduling: Schedule the backups of your instances on a hourly, daily or weekly basis.

Flexible Backup Retention: Retain up to 10 snapshots of the backup AWS EC2 instances to restore from during recovery.

Application-Aware Processing: Get application-consistent backups of your Microsoft applications like MS Exchange Server and MS SQL.

Pre/Post Backup Scripts: Run custom scripts in the form of batch files automatically before and after every backup job.

Instance Recovery: Restore up to 10 instances in the original AWS account and region from the same backup data instantly.

Volume Recovery: Recover only the required volumes by attaching them to original EC2 instances by configuring the volume attributes.

Reliable Reports: Get detailed reports about the backup and recovery jobs along with the activity logs for every operation.
