

BDRSuite is a comprehensive Backup and Disaster Recovery solution for virtual, physical, cloud, and SaaS applications. It is designed to meet all the backup requirements of small, medium, and enterprise businesses.

BDRSuite for Data Center and Private Cloud

VMware Backup & Replication: Agentless backup and DR solution for the VMs running on VMware ESXi host and vCenter Server environments.

Hyper-V Backup & Replication: A reliable data protection software that offers host and cluster-level backup & replication for Hyper-V virtual machines.

Windows Backup (Disk-Image & Files/Folders): BDRSuite offers Disk-Image and Files/ Folders backup for Microsoft Windows Servers and Workstations.

Linux Backup (Files/Folders): Secure the business critical data across the linux servers at a file/folder level, and restoring the same at granular level.

Application Backup: Protect your business critical application & databases such as Microsoft Exchange Server, SQL server, Microsoft SharePoint, Microsoft Outlook & MySQL.

BDRSuite for SaaS Applications

Microsoft 365 Backup: Ensure complete protection to your Office 365 user mailbox i.e., Emails, Contacts, Calendars, Group Mailbox, & OneDrive data, along with SharePoint Online, Teams.

Google Workspace Backup: Protect Google Workspace users' mailbox, by backing up their Emails, Contacts, Calendars, Google Drive and Shared Drive.

BDRSuite for Endpoints

Endpoints Backup: Backup data across critical endpoints to ensure that users' data are protected from an accidental deletion or any system crash, with near continuous data protection.

BDRSuite for Cloud Workloads

AWS Backup: BDRSuite supports agentless backup for the AWS EC2 instances by leveraging cloud native APIs of Amazon, and helps to restore the backup data at an instance or volume level.

Deployment Options

✓ **& Offsite locations**
(Windows, Linux)

✓ **Cloud Instances**
(AWS, Azure, Google Cloud)

✓ **Containers**
(Docker, QNAP, Synology NAS)

Protection against Ransomware/ Disaster

BDRSuite provides robust security against ransomware attacks:

- ✓ 3-2-1 backup policy stores multiple copies of data in different locations, reducing risk of data loss.
- ✓ VM replication allows for quick recovery of virtual environment in the event of a disaster.
- ✓ Instant recovery options enables quick resume of business operations, minimizing the downtime and impact on business.
- ✓ Data integrity check ensures backups are free from corruption and tampering.

Why Choose BDRSuite?

3x

Faster
Backup & Recovery

15 mins

Faster implementation
With minimal learning curve

<5

Resume your
business in few mins

Save 70%

Promising the lowest price
Compared to market leaders

3-2-1 Rule

Protect your business against
ransomware

24/7

Responsive technical support
With industry's best SLA

Key Differentiators

Simple and Centralized UI: Protect the data across physical (Windows, Linux, Mac), virtual (VMware, Hyper-V) SaaS (Microsoft 365, Google Workspace), & cloud (AWS, Azure) workloads, through a single console.

Intelligent Where-it-Left Off Feature: BDRSuite intelligently resumes image-level and file/folder-level backups from where it left off during the last schedule after any interruption.

Unique Reverse/Forward Incremental Approach: BDRSuite exposes every incremental backup as a virtual full backup, allowing for quick recovery from any point in time without involving merge time.

Efficient Backup Storage Technique: BDRSuite leverages its proprietary file system to effectively manage storage by storing the backup data blocks as smaller chunks (each 100 MB).

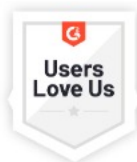

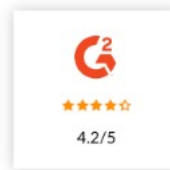

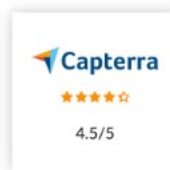

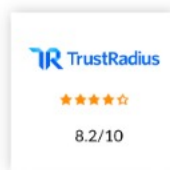

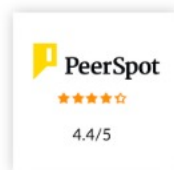

Best in class Data Retention Technology: Flexible retention policies that streamlines the process by removing identical blocks and reconstructing the chunks, saves time and archives the backup data for ages.

Clutter-free UI and Flexible Deployment: The initial setup and configuration of BDRSuite takes only less than 15 mins. It supports both standalone and cluster deployments.

Secured Remote Backup over WAN: Easy and effective to backup users' data, regardless of their location or where to backup to. The backup data is secured through AES-256 bit algorithm both at the flight and at rest.

Explicit Reporting with Email Notification: Advanced reporting and notification features includes VM and job level reports, email notifications and integration with third-party tools.

Backup software that is highly rated by customers and experts
